Zaid Shabir

Srinagar, JK, India | 9682359078 | ZaidShabir67@gmail.com | linkedin.com/in/zai14 | github.com/Zai14

Professional Summary

B.Tech Computer Science graduate with hands-on experience building AI/ML applications, satellite imagery pipelines, and cloud-backed full-stack systems. Strong in Python, machine learning, REST API development, and deploying backend services using AWS, Supabase, Lambda, S3, and edge functions. Applied quantitative reasoning to crop disease detection, medical diagnosis, and real-time analytics systems, with experience translating data-driven problems into production-oriented software.

Education

University of Kashmir — Srinagar, India
B.Tech Computer Science & Engineering — *Dec 2021 – Nov 2025*

New Convent School — Srinagar, India
Higher Secondary (Non-Medical) — *Jan 2019 – Jan 2021*

Experience

Applekul — Hybrid
Junior Full-Stack ML Engineer — *Jan 2026 – Present*

- Built a TypeScript/React farm management platform integrating Planet.com & SentinelHub satellite imagery for crop disease detection and precision agriculture workflows.
- Integrated weather station sensors with AWS IoT services to ingest real-time environmental data for disease prediction and farm monitoring workflows.
- Designed REST API-backed backend services using Supabase, edge functions, and AWS components to support real-time weather, IoT, and disease prediction data flows.
- Used TensorFlow models, AWS Lambda, and S3-powered data pipelines to process multispectral imagery and field data for scalable crop health analysis.

Rochester Institute of Technology (Excelerate Internship) — Remote
AI Vibe Analysis Engineer Intern — *Mar 2025 – May 2025*

- Built and evaluated a PyTorch-based sentiment analysis pipeline, improving NLP dataset interpretability by 25%.
- Developed React-based AI frontend modules supporting 500+ user interactions with real-time visualizations and model-driven insights.

Projects

Applekul One / GongulOS : AI Farm Management Platform — 2025-Present

- Architected a full-stack farm management system integrating satellite imagery analysis, weather-based disease detection, financial tracking, and advisory recommendations.
- Integrated Planet.com/SentinelHub APIs with TensorFlow ML models for real-time crop health monitoring, yield prediction, and field-level analytics.
- Built REST APIs and cloud-backed backend workflows using Supabase, AWS, S3, Lambda, and edge functions to deliver scalable farm analytics dashboards and IoT-connected data services.

NodeLink/Kraken: Decentralized E2E Encrypted Messenger — 2024 – 2025

- Built privacy-focused messaging platform with **AES-GCM encryption**, **ECDH key exchange**, and **ECDSA authentication**.
- Integrated **MetaMask Web3 login** and **Supabase/GUN.js** for decentralized storage serving 100+ concurrent users.
- Engineered real-time crypto wallet transactions within uncensored P2P messaging infrastructure.

AI Medical Diagnosis System | Python, Scikit-learn, Streamlit — Oct 2024 – Jan 2025

- Deployed ML models achieving **87% accuracy** for disease prediction on healthcare datasets.
- Piloted Streamlit dashboard with real-time medical data analysis and 40% increased user engagement.

Magisk on WSA: Android Root Solution — Oct 2021

- Ported Magisk root to Windows Subsystem for Android, enabling full app customization.
- Removed Amazon Appstore restrictions, supporting sideloaded APKs across all apps.

Technical Skills

Languages: Python, JavaScript, TypeScript, C, HTML/CSS

AI/ML: Scikit-learn, PyTorch, TensorFlow, Pandas, NumPy, Matplotlib

Backend & APIs: REST APIs, FastAPI, Node.js, Supabase, Edge Functions

Cloud & DevOps: AWS, Lambda, S3, Git, VS Code, Netlify, Neon

Frontend & App Frameworks: React, Next.js, Expo, Streamlit

Satellite & AgTech: Planet.com, SentinelHub, multispectral imagery analysis, IoT data integration

Cryptography & Web3: ECDH, ECDSA, AES-GCM, MetaMask, GUN.js
